

Four Head Metal Halide Lighting Tower

57137

PRODUCT PERFORMANCE

These figures are only approximations and are given assuming the mast is extended to 9m.

LUX LEVEL	APPROX AREA COVERAGE
200	120m ²
100	414m ²
50	660m ²
20	4500m ²

PRODUCT DETAILS

- Combined generator and lighting tower.
- 4 x 1000W Metal halide metal case lamps.
- Large 9m lighting tower that produces bright white light.
- Ideal for road works, site lighting or large outdoor events.

PRODUCT SPECIFICATIONS

• Max height	9m
• Erection time	Less than 30 seconds
• Lights	4 x 1000W Metal halide bulbs
• Rotation	360° full rotation
• Weight	1100kg
• Power supply	10kVA – 240V in built generator 6kVA of power available when all four lights are on
• Run time	96 hours
• Fuel Tank Capacity	116 Litres

PRODUCT FEATURES

• Fast erection time	Saves time initially, but for several machines this saving could be significant.
• Easy erection	Step by step guide on how to deploy the light. No training required by the user.
• 96 hour run time	Can be run for an entire weekend without needing to be refuelled.
• Metal halide lights	Four times more powerful than Tungsten Halogen bulbs.
• Low noise	88Lwa/65DBa - Suitable for the event or construction market, complies with noise regulations.
• 240V Power supply	Generator is also able to run other electrical units from the lighting tower.
• Sight level indicators	Allows safe deployment/positioning on uneven ground.
• Bunded fuel tank	Environmentally friendly, no spillages.

NOTES

When starting up the four individual lights they should be turned on separately with 1 minute intervals between each light.

When the lamps are switched off, a minimum of 15 minutes should pass before re-lighting to prevent damage to the power supply.
